Monitor your alternative care sites with a lightweight documentation solution

**Track low-acuity and vulnerable individuals at risk for COVID-19**
As entities seek to provide care to at-risk populations in a number of different configurations and care sites, they need a tool that can be stood up quickly and can accommodate their needs for data capture and tracking of patient information.

**CareTracker helps monitor individuals quickly and accurately**
*CareTracker*® is a quick-to-deploy and easy-to-use electronic data collection solution that helps eliminate the need for paper documentation.

The solution supports your low-acuity needs at alternate care sites — hotels, convention centers and more — with assessments focused on social determinants of health, as well as screening questions around exposure, contact and symptoms of COVID-19.

*CareTracker* helps streamline the data collection process with touchscreen devices like iPads®. All of the information is then

---

**Key benefits**
- A customizable data collection tool with the ability to screen and track COVID-19 symptoms at low-acuity alternate care sites.
- Designed for flexibility and compatibility with many different health care environments and needs.
- Helps streamline your data collection processes with mobile touchscreen devices.
- Information is stored in the cloud to help ensure data is available for review.
- Summaries and data analysis can be completed in seconds.
stored in the cloud to help ensure the data you need is available for review whenever needed.

CareTracker features picture icons with yellow highlights indicating categories that must be completed each day or shift. This helps remind caregivers to monitor and collect data around COVID-19 symptoms, and other areas, at a designated time. Once completed, the yellow highlight turns gray indicating that the minimum documentation necessary has been completed.

The simple visual icons and intuitive workflows are designed to help minimize reading and learning time. This helps staff members become ready to start documenting in minutes.

Helps documentation accuracy and compliance

CareTracker can help make it easier to record accurate and complete information about each individual under your care so you have a more precise picture of everyone’s status. This helps eliminate inconsistencies in documentation and non-compliance.

Messaging throughout your organization

Staff can also send and receive secure messages from workstations and iPads. Frontline caregivers can alert other staff to changes in conditions that may require immediate attention.

Helps highlight potential issues before they become problems

CareTracker Clinical Intelligence analyzes data records and can help quickly spot potential issues before they become a problem.

The dashboard highlights areas of concern for each individual and can help identify who might be at the highest level of risk.

When a question comes up, a few clicks will get you the information you need to help make necessary decisions.

“The accuracy and amount of documentation CareTracker allows us to collect now is amazing.”

Mary Ellen Griffin
Director of Nursing Informatics
Encompass Health Corporation

About Cerner

We’re continuously building on our foundation of intelligent solutions for the health care industry. Our technologies connect people and systems, and our wide range of services support the clinical, financial and operational needs of organizations of every size.
